How we did the ACMS

Nationwide cross-sectional survey

- Informed by systematic review and analysis
- Computer-assisted telephone interviews
- Random sample of the population

8500

Participants aged 16 and over

3500

Adolescents/young adults aged 16-24

Enables future Wave Studies, Cohort Study

5000

Adults aged 25+

1000 adults in 5 strata (25-34, 35-44, 45-54, 55-64, 65+) Enables measurement of health through life The Australian Child Maltreatment Study (ACMS), a national survey of the prevalence of child maltreatment and its correlates: methodology

Child maltreatment is disturbingly common in young people 16-24

Prevalence of maltreatment in young Australians aged 16-24

28.2%

Physical abuse

25.7%

Sexual abuse

34.6%

Emotional abuse

10.3%

Neglect

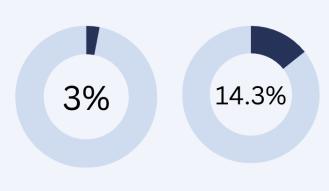

43.8%

Exposure to domestic violence

40.2% experience multi-type maltreatment

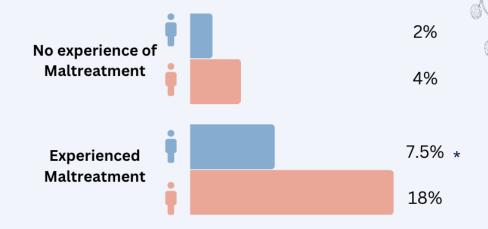

Clear associations between maltreatment and past year self-harm in young people 16-24 years

Of young people without CM report self harm in past 12 months

Of young people *
with CM report self
harm in past 12
months

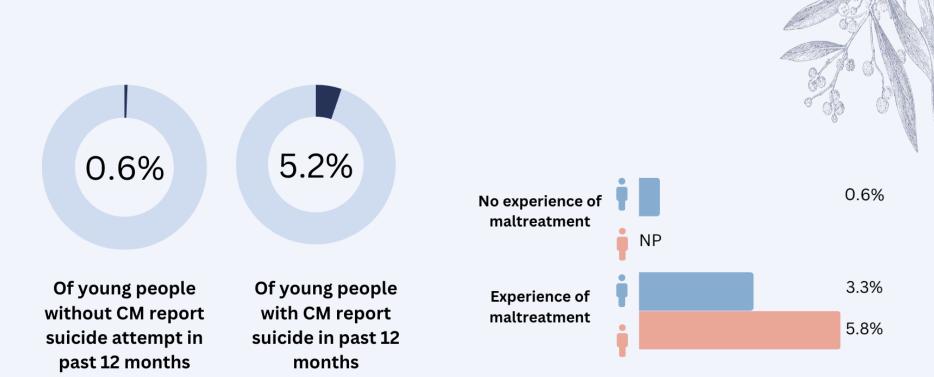

Question

Have you ever deliberately harmed or injured yourself, without intending to take your own life?

Has this happened in the past year?

Clear associations between maltreatment and <u>past</u> <u>year</u> suicide attempts

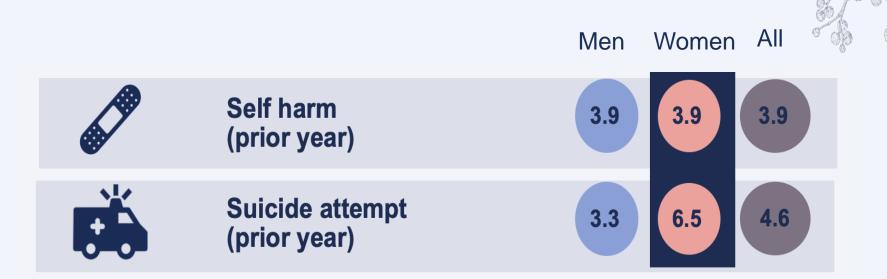

Question:

Have you ever attempted suicide? Has this happened in the past year?

Gender effects on health risk behaviours by maltreatment status (odds ratios)

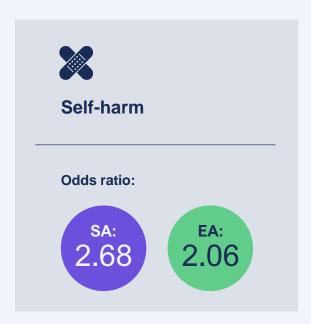

>1 represents increased likelihood compared to those with no maltreatment

Model adjusts for age group, socio-economic status (quintiles of SEIFA index of relative disadvantage based on postcode of current residence), experience of financial hardship during childhood and current financial strain

Sexual abuse and emotional abuse produce the strongest associations with self-harm and suicide

Implications

- Child maltreatment highly related to self-harm and suicide attempts
- Strong gender effects differentially impact girls and women
- Child sexual abuse and emotional abuse particularly harmful
- Prevention of child maltreatment should form an important part of self harm and suicide prevention initiatives. Highly likely to have experienced maltreatment
- Importance of assessment and trauma informed mental health support for children under child protection orders
